

## Invicta Access Platforms

Work at height safely & efficiently

Our access platforms provide a safe way to carry out regular and unplanned maintenance and inspections. The platforms have been manufactured in accordance with HSE document PM28 fourth edition and include the option of a harness for added safety while operating.

### HIGH-LIFT PLATFORM

When additional lift height is required for access, the high-lift platform is the right solution. The platform features automatic gate assembly and ladder access.

### FOLDING ACCESS PLATFORM

Where space is restricted, the folding access platform comes into its own. The reliable structure collapses down and provides quick access, assembled in minutes.

3 SIZES:

IAP 6

IAP 7

IAP 8

### ACCESS PLATFORM

These cost-effective, entry-level access platforms are perfect for tackling any urgent unplanned maintenance or inspections. Choose the access type and platform size to suit your needs

## WIDE ACCESS PLATFORM

The telehandler mounted platform gives you increased access to a wider area. The larger base enables two colleagues to work together safely and easily.

## CRANE MOUNTED ACCESS PLATFORM

Use this platform fork-mounted or crane slung, including within construction environments via an overhead crane. It features an internal tool tray for maintenance work.

## Stay LOLER compliant with Thorough Examinations

### Our service keeps the process simple

Lifting equipment and accessories, such as access platforms, must be inspected for safety every 6 months. Our Consolidated Fork Truck Services (CFTS) Inspector attends your site and leaves you with a report of thorough examination, including the next inspection date, as required under LOLER.
