

## **Load Protection**

#### Prevent damage with our range of load protection options

A selection of Invicta load protection solutions which can add substantial cost-saving benefits to a wide range of applications.

#### LOAD BUFFER

Specifically designed to reduce damage to fragile finished loads from the fork back height when being loaded or unloaded via a forklift truck. The Load Buffer simply attaches to the face of the fork and is held in place magnetically. This eliminates the time and money lost decanting damaged stock.

#### FORK SOX

A simple and cost-effective solution to aid load protection whilst handling fragile or finished products. These forks sox are easily fitted by sliding onto the fork blade and securing with a Velcro strap around the heel of the fork. These protective sleeves will help contribute to the reduction of damage to the product when being handled by the forklift forks, which in turn will have a dramatic effect on cost savings due to damage.

#### MAGNETIC RUBBER FORK COVER

The Versatile Magnetic Rubber Fork Cover is ideal for use when increased friction is needed between the forks of the forklift truck and the product to be lifted, to prevent slippage of load. When picking up a finished product with the Magnetic Covers, the finished surface is protected from accidental damage.

#### LOAD PROTECTION SHOCK ABSORBER

The load protection shock absorber has been designed to reduce damage to fragile loads from the fork back height when being loaded or unloaded via a forklift truck. This helps eliminate the time and money lost decanting damaged stock. The load buffer simply attaches to the face of the fork and is held in place magnetically. Best suited to applications where the load face is uneven, such as glass bottles, the IDSA rubber fingers mould to the product giving increased protection.

#### FORK GLOVE

Specifically designed to greatly reduce product, pallet, and racking damage, while enhancing safety without affecting the operation effectiveness of the truck. The fork glove attaches to the tips of the forks by a specific bonding and must be applied to a new and undamaged fork surface.

# **Stay LOLER compliant** with Thorough Examinations

#### Our service keeps the process simple

Lifting equipment and accessories, such as access platforms, must be inspected for safety every 6 months. Our Consolidated Fork Truck Services (CFTS) Inspector attends your site and leaves you with a report of thorough examination, including the next inspection date, as required under LOLER.
