

## Maintenance Support Block

### Model – IMSB

### Description

The **Support Blocks** were developed to secure and support Forklift Trucks during maintenance, allowing for continual lift of a Forklift Truck for the duration of service. Providing consistent stability once the truck has been jacked to the appropriate height. Primarily used for supporting lift trucks, these blocks can be used to support a wide range of machinery including Cars, Trailers, Caravans or other MHE.

Model	Width (mm)	Depth (mm)	Height (mm)	Height Range (mm)	Capacity (Tons)
IMSB-245/130/50	245	130	50	100/150/200/250	10

### Standard Features

- Each pack of 10 blocks includes:
- 2 base blocks
- 2 top blocks
- 6 interconnecting blocks for safe brick stacking
- Surface of blocks are ribbed to increase grip
- Lightweight and easy to handle
- Will not split or rot

### Safety information

- Use maximum of 5 blocks for 1 stack
- The area of use must be dry and clean to prevent the blocks from slipping
- The base block must always be placed on the floor and the top block underneath the lift truck
